## 12. ECOLOGICAL INFORMATION

12.1 **European Parliament Regulation (EC) No. 648/2004 states that a surfactant is readily biodegradable if the level of biodegradability in one of several OECD (Organization for Economic Cooperation and Development) screening tests is 60% or more within 28 days. The following surfactants used in Formula 1 Dry Clean are readily biodegradable according to the Regulation No. 648/2004 utilizing the OECD screening tests.**

### **Biodegradation of Linear Alkyl Sulfates (EU: 205-788-1 / CAS: 151-21-3 / < 5% by weight)**

Linear Alkyl Sulfates (AS) have been used throughout the world as an **anionic surfactant** in both household and industrial detergent products. As a result of their wide spread use, the biodegradation characteristics of AS have been studied thoroughly under both laboratory and environmental conditions.

Primary biodegradation can exceed 90% in two days. Ultimate or complete mineralization (> 60% in 28 days, meeting 10 day window) has been observed under several OECD test methods (301B-E).

Based on the results of these tests, Alkyl Sulfates are considered readily biodegradable.

## 13. DISPOSAL CONSIDERATIONS
